“ Delivering Innovative Network Solutions ”

Turnkey Solutions Portfolio

Enterprise Solutions

Complete Infrastructure Solutions

Wi-Fi/Wi-Mesh Coverage Solutions

Telecom Switch Room Solutions

We provide complete network solutions utilising cutting edge telecoms equipment sourced globally and integrated by our professional staff

Experience

We have many years experience in designing, implementing, managing and maintaining networks. Our multi-skilled team span communication network disciplines from network infrastructure to converged network solutions.

Our Markets

We are traditionally focused on fixed and mobile telecom network operations. The convergence of technologies and increased use of communication networks has led to our development into Transport, Utilities, Government, Defence and Enterprise.

Global Reach

Our internationally experienced teams have delivered challenging projects meeting stringent timescales, budgets and technical constraints across seven continents. We aim to maintain a technical focus through our specialist staff and through our regional offices.

Delivering Commercial Results

Whether the requirement is for an innovative approach to support legacy network deployments, or to deliver a cutting edge next generation network. Our optimised solutions are designed to meet your business case requirements, optimising spend and maximising return on investment.

Long Term Commitment

We are a leader in the delivery of performance enabling services, and support our solutions from network conception to retirement. Our services are designed around network value enhancements that accelerate, extend and optimise the value of both legacy and cutting edge communication networks. Our commitment is to support your network from conception through its entire life cycle.

Broad Offering

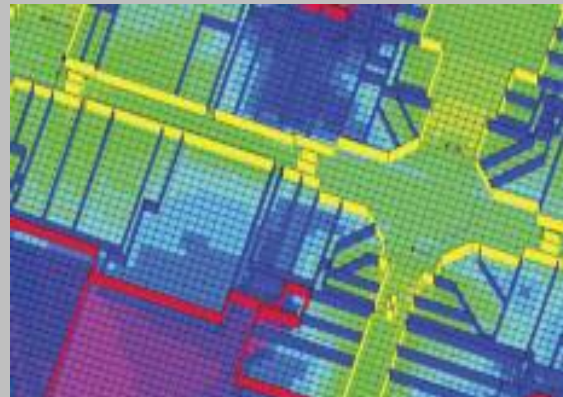

We have a wide solutions based product portfolio. We have developed this through our hands on experience of communications technology and infrastructure, applying this knowledge to the needs of multiple business sectors.

CCTV Surveillance Solutions

PtP/PtMP Radio & Microwave Solutions

Complete Network Planning

Transport Solutions

Complete Service Capabilities

Operational and Maintenance

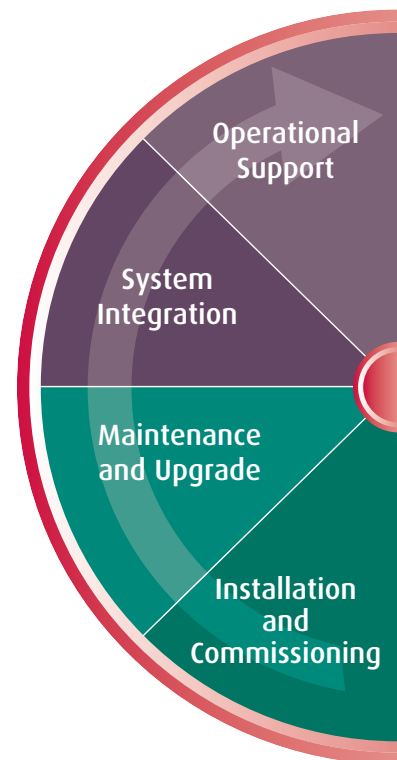

- Equipment & system evaluation & testing
- Training services
- RF Planning - microwave, Wi-Fi, cellular in-building, transmission & data network design & capacity planning
- Synchronisation consultancy & design
- Network consolidation

Implementation

- Integrated project management within all areas of scope
- Installation & commissioning of equipment & services
- Common processes & procedures eliminate duplication & reduce cost
- Multi-skilled engineers
- Delivery of system upgrade programs on live networks
- Broad range of vendor relationships & accreditations

We pride ourselves on our passion customer service and dedication to delivering excellent

We are a clear recognised delivery partner for network service solutions. Our performance delivery spans design and install through to maintenance and support. Our services are designed around a time to value experience that can accelerate, optimise, and add value to high performance cutting edge communication networks. We can extend life span on legacy networks.

Implementation and Integration Services combined with our Infrastructure, Planning and Build expertise are designed to bring revenue generating capabilities online faster. We can provide our clients with productivity gains through faster equipment rollout of new

Our Professional Services help build the operational excellence needed to maintain the required levels of network performance, reliability and availability. We can scale and adapt to new business requirements, extending equipment life span and reducing operational costs.

services and applications allowing enhanced levels of customer satisfaction.

Our operational and maintenance services are designed to cut exposure to operational risks and ensure that the investment made in your network infrastructure yields maximum returns, delivering the service levels that you require.

Professional Services

- 24x7x365 Technical support desk & NOC
- Service level agreements
- On site support & field maintenance
- Remote network management
- Spares management, provision & repair management
- Network health checks & audits

Infrastructure Planning & Build

- Detailed design engineering
- Product & material procurement, supply & distribution
- Civil, electrical & mechanical construction
- Health & safety management
- Quality control/quality assurance
- Site acquisition

Business Sectors

Enterprise

We provide flexible solutions, for the specific needs of every type of enterprise organisation; whether an Educational, Healthcare, Finance, Public Sector or Hospitality organisation. We can provide unified communication solutions that can help to grow your business, and optimise your operational effectiveness and efficiency.

- Campus Connectivity
- Leased Line Replacements
- Unified Communications
- Rural Broadband Connectivity
- WAN, MAN & LAN Solutions Surveillance & Security

Telecoms

We provide reliable multi-play services voice, data and video, for both business and residential customers. Our services are carrier-grade, reliable and future-proof for converged telecoms solutions. We install and run control systems for multi-disciplinary telecom networks.

- End to End Services
- Radio Access Networks
- Wireline Access
- Remote Site Management, Monitoring & Control Systems
- Integration of Bespoke Software Control Systems

Business Sectors

Transport and Utility

We enable communications, monitor network capabilities, provide real-time control and high speed Internet access. We manage infrastructure to provide safe, more reliable and secure services. Our solutions provide the choices that are needed to achieve diverse communication networking goals.

- Remote Site Management, Monitoring & Control Systems
- Rapid Deployment Infrastructure
- Telecommunication Systems
- CCTV Management Systems

Government and Defence Solutions

We provide communication solutions enabling effective operations for Military, National Security, Local Government and “Blue Light” Emergency Services. Utilising the best of today’s commercial technology to meet the most stringent operational demands. We enable accurate and reliable communication solutions for organisations tasked with safeguarding national security, saving lives and protecting property.

- Homeland Security
- Border Surveillance & Area Security
- Wide Area Network Transmission
- IP-LAN, Fibre & WiMAX
- National, Local & Provincial Municipal Wireless
